

MagicMond — Service Page Template & Ranking Guide

Service page anatomy · Blog strategy · Local SEO (Delhi) · July 2026

MagicMond: Service Page Template + Blog Strategy + Local SEO (Delhi)

PART 1 — Service Page Template

What it is: NOT a blog article. A permanent page on your site (e.g. `magicmond.com/app-development-company-delhi`) that targets ONE money keyword. Write one per service. 1,200–2,000 words, each genuinely unique (don't copy-paste between them — Google demotes that as doorway pages).

The Template (copy this structure, replace [brackets])

```
URL: /app-development-company-delhi
Title: App Development Company in Delhi | MagicMond (≤60 chars)
Meta description: MagicMond is a Delhi-based app development company.
[X]+ apps delivered for startups & businesses. Android, iOS, Flutter,
React Native. Get a free quote. (150-160 chars)
```

1. H1 + Answer Paragraph (top of page)

H1: App Development Company in Delhi

MagicMond is an app development company in Delhi, India, building Android, iOS, and cross-platform apps for startups and growing businesses. Since [year], we have delivered [X]+ apps across [industries]. We handle design, development, launch, and maintenance under one roof.

→ 40–60 words, directly answers "who are you + where + what". AI engines (ChatGPT, Gemini) quote exactly this paragraph.

2. H2: Our App Development Services in Delhi

List what's included, each as H3: Android App Development / iOS App Development / Flutter & React Native / UI/UX Design for Apps / App Maintenance & Support. 2–3 sentences each, mention real tech stack.

3. H2: Our Development Process

5–6 numbered steps (Discovery → Design → Development → Testing → Launch → Support). Shows experience — Google's E-E-A-T signal.

4. H2: Apps We've Built (MOST IMPORTANT SECTION)

2-3 real case studies WITH NUMBERS:

H3: [Shoemonkies] – [what you built]
Problem → What we did → Result: "[40% more orders in 3 months]"
[Link to full case study page]

This section is why YOUR page ranks and a competitor's template page doesn't. Real numbers, real screenshots, client names/logos.

5. H2: App Development Cost in Delhi

Price ranges table or "what affects cost" (features, platform, complexity). Indian buyers search cost keywords heavily — this section catches "app development cost" searches AND builds trust.

6. H2: Why Choose MagicMond

4-5 short points with proof: [X]+ projects, [X] years, Delhi-based team, full-stack (design+dev+marketing), post-launch support. No empty claims — every point needs a number or fact.

7. H2: FAQ

5-8 real client questions as H3s, 2-4 sentence answers: - How much does app development cost in Delhi? - How long does it take to build an app? - Do you develop both Android and iOS? - Do you provide support after launch? - Can you redesign/fix an existing app?

8. CTA

One clear action: "Get a free consultation" + phone/WhatsApp/form.

Also on the page (technical)

- Canonical URL pointing to itself
- Service + LocalBusiness JSON-LD (see AI-SEO-INSTRUCTIONS.md Step 4, city = Delhi)
- Delhi office address + embedded Google Map (for city pages)
- All images: descriptive alt text ("food delivery app UI designed by MagicMond")

Links this page needs

Internal links (you control these — do immediately): - FROM homepage + main nav/footer → this page (keyword anchor: "App Development") - FROM this page → 2-3 related case studies, → UI/UX service page, → related blog posts - FROM every related blog post → this page (anchor: "app development company in Delhi") - Rule: 3-6 internal links in the body, descriptive anchors, never "click here"

Backlinks (other websites linking to you — this decides competitive rankings):

Source	How	Priority
Clutch, GoodFirms, DesignRush profiles	Free listing, link to site	☐ Do first
JustDial, Sulekha, IndiaMART	Free Delhi business listings	☐ Do first
"Top app developers in Delhi" listicles	Find them (search + ask ChatGPT), email authors to include you	High
Guest posts on dev/marketing blogs	Write for them, bio link back	Medium
Digital PR	Publish original data (e.g. "we surveyed 50 Delhi startups on app budgets"), pitch to tech media	High value, slower
Local Delhi business press / startup blogs	Founder story, case study pitch	Medium

☐ Never buy cheap backlink packages (Fiverr etc.) — Google's 2026 spam updates penalize exactly this.

Realistic path: internal links + directories get you moving in weeks; 10–30 quality backlinks + GBP reviews get city keywords in 3–6 months.

PART 2 — Content & Blog Strategy (§5 explained simply)

Why blog at all: Service pages catch people ready to buy. Blog posts catch people researching ("app development cost in india") — then internal links push them to your service page. Blogs also build topical authority: Google ranks your service page higher when 10+ related quality posts surround it.

Structure = clusters, not random posts:

```
PILLAR: /app-development-company-delhi (service page)
↑ all these link to it:
├─ Blog: App Development Cost in India (2026)
├─ Blog: Flutter vs React Native – What We Recommend
├─ Blog: How to Hire an App Development Company (12 questions)
├─ Blog: How We Built [Shoemonkies] – Case Study Breakdown
└─ Blog: App Development Timeline: What Takes How Long
```

One cluster per service. Start with cost/price posts — highest buyer intent in India.

How to write posts that rank in 2026: 1. Pick keyword from Google Keyword Planner / autocomplete / AnswerThePublic 2. AI draft (ChatGPT/Claude free) — allowed by Google 3. **Rewrite with YOUR real data:** your prices, your screenshots, your opinions, your project stories — unedited AI posts get deindexed 4. Named author + date + Article schema 5. Add 2–3 internal links to service pages 6. 1–2 posts/week, consistently — beats 20 posts then silence

PART 3 — Local SEO: How "app development company in Delhi" is actually won (\$7, with Delhi)

For "company in Delhi" searches, Google shows the **local 3-pack (map results) above organic results** — and that's won OUTSIDE your website. Weights: Google Business Profile 32%, on-page 19%, reviews 16%, links 15%.

Step 1 — Google Business Profile (biggest single factor): - Create/claim at business.google.com with your Delhi address - Primary category: "Software company" (pick ONE matching your #1 keyword) - 100% complete: services list, hours, photos of real office/team, description with "app development company in Delhi" - Post weekly (case study snippets, offers)

Step 2 — Reviews (review recency = #1 local ranking factor): - End every project with a review request: Google first, then Clutch/GoodFirms - Steady 2-4/month forever beats 20 in one week - Ask clients to mention the service: "MagicMond built our Android app" — keywords in review text count - Reply to every review

Step 3 — NAP consistency: Exact same Name / Address / Phone on: website footer, GBP, JustDial, Sulekha, IndiaMART, LinkedIn, Clutch, GoodFirms. Any mismatch weakens trust.

Step 4 — Delhi service pages on your site: The template from Part 1, with Delhi address, Delhi clients/case studies, embedded map, LocalBusiness schema (addressLocality: "Delhi").

Step 5 — What NOT to do: Don't create /app-development-mumbai + /app-development-noida + /app-development-gurgaon... with the same swapped-city text. Google demotes these as doorway pages. One city done deeply. Expand to a second city only when you have real clients/case studies there.

Order of work

1. Write first service page with this template (app development, Delhi)
2. GBP live + first 5 review requests
3. Directory listings (Clutch, GoodFirms, JustDial, Sulekha)
4. First 4 blog posts (start: cost guide) linking to the service page
5. Repeat template for next service
